
Must Read :: How -To post a FreeFixer Log?

Posted by securitywonks - 2007/10/17 19:12

To post a FreeFixer log,

- a) you need to first make sure that you have FreeFixer installed in your computer,
- b) then open FreeFixer's Program interface and Click on "Start Scan" link
- c) Hold on for few minutes, as scanning may take approximately around few seconds to 2 minutes time for completion, when you will find a list of different entries under different categories.
- d) Then Click on "Save log" link which is located beside other link options like "Fix" & "Scan Again", all three links located in the top and bottom of the program interface.
- e) The Save Window interface opens and there in, type the file name or leave the default file name "freefixer-log" intact and then Click "Save" button after you select the location of the file using dropdown menu in the top of the SAVE Window.
- f) Now open the log file freefixer-log.txt or the log file (with another name, if you had assigned a different name for the freefixer log file while saving the log) in a text editor like "Notepad" and click the following KEY COMBINATIONS on the keyboard. (CTRL key + A button) & ((CTRL + C button)and then Press (CTRL key + V button combination) in the freefixer logs forum in the thread where you ask us for support and help analysing the log to guide you clear malware from your computer.
