
Malwarebytes' Anti-Malware 1.31 LOG

Posted by atecton - 2009/01/02 07:04

Recently ive been having problems with my PC and internet. I run firefox, but have been experiencing some problems that i never have before. i frequently get popups when they used to always be blocked, me PC has been running much slower recently, and my current anti-virus software (Norton 360) will no longer run. It just takes forever for it to scan, and wont scan once it does.

Malwarebytes' Anti-Malware 1.31

was highly reviewed, so ive downloaded it, and attached is the file log. COuld someone please help me with what should be deleted, and what should be left alone?

thank you http://www.securitywonks.net/site/images/fbfiles/files/mbam_log_2009_01_01__21_55_41_.txt

sorry for delayed response

login to safe mode:

then using freefixer,

please fix the following

{2B0CE9AD-62C6-43DD-9202-D4B5A8087AB4}, , C:\WINDOWS\system32\yaywtRjJ.dll
{5a921d9b-125b-4719-83a6-81372510ca57}, , C:\WINDOWS\system32\kmweqy.dll

HKCU\.\Run, prunnet = "C:\WINDOWS\system32\prunnet.exe"

DELETE those files too

post your log,

we are planning to change backend software soon, please check back and post if you need further help, thank you
