
freefixer log

Posted by BoldAngel - 2009/03/16 01:51

Hi, I havent been able to get on the internet for weeks now with my desktop computer. I am currently on my laptop.

I tried to remove sp3 thinking that it maybe the cause, but uninstalling only gets part of the way, then I get a message saying that it cannot find hh.exe.000 and the process stops at updating the registry and the entire computer freezes.

There are other issues with winsock, which I tried to fix by downloading the winsock xp fix, but I still cant get online. I hope that the log helps.

Thank you in advance http://www.securitywonks.net/site/images/fbfiles/files/freefixer_log-aa86683357f6539ad3e19aa738bafec3.txt
